ENGINEERED  
FOR PRECISION  
SEEDING PERFORMANCE

MORRIS

# SMART DESIGN PRECISION GRADE

Every feature, every option, the silver metallic paint with long term corrosive protection - is all designed to not only raise the standard but raise your game.

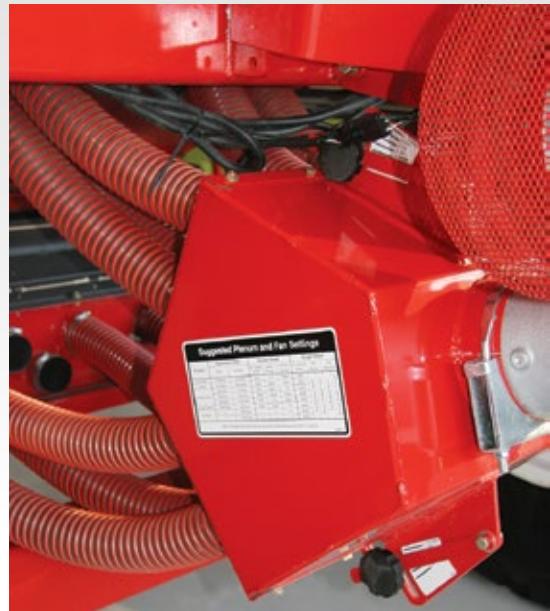

## Metering System

Unique, spiral-fluted metering wheels gently roll product into the air stream in a constant flow. Metering wheels are matched with divider heads to ensure accuracy and efficiency when seeding a full range of seed varieties. Stainless steel collectors provide years of usage without corrosion. Regular meter body or coated meter body option for high corrosive or sticky materials.

## Easy Access

The 9s air carts include a quick release access meter body door and quick release collector door offer easy access to meter wheels and rate calibration.

## Adjustable Plenum

When double-shooting, a fully adjustable plenum lets you divert more air to the meter with heavier products and higher rates of application, and less with lighter or more fragile products.

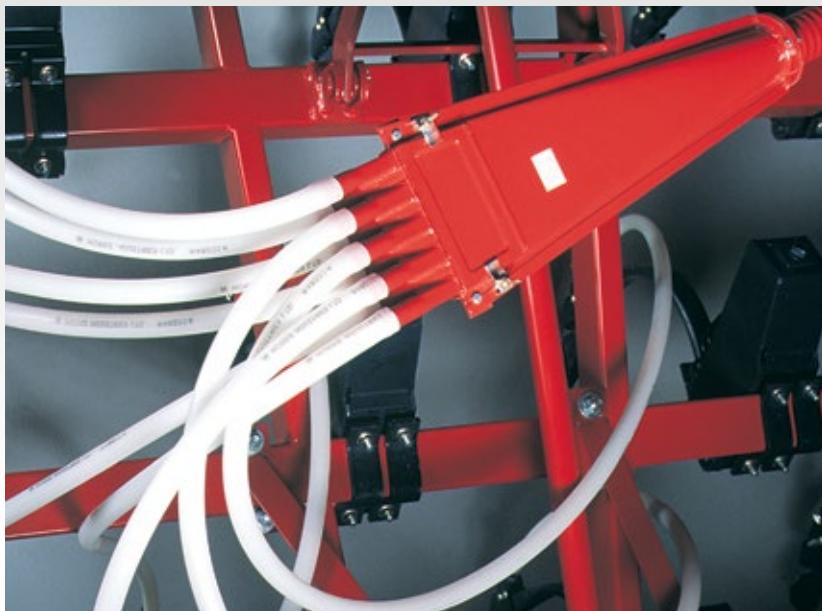

## Diverter Valve

The diverter valve makes it easy to switch between single- and double-shoot. The valve allows the product in each tank to combine evenly into one air stream. Or you can choose to keep the product separate.

## High Flow Fan

The high-flow fan gives added product-carrying capacity. The fan's piston hydraulic motor is 98% efficient and rated for 10,000 hours of service.

## Air Delivery

A unique Morris design delivers a smooth, horizontal flow of material that eliminates abrupt directional changes and reduces seed damage. The patented flat fan diver head distributes product evenly to each seed boot for uniform emergence.

## Mechanical Ground Drive

Uses a positive lock on all drive sprockets to deliver smooth and reliable metering. The positive ground drive from the wheel compensates for any changes in ground speed, ensuring precise product rates at all times.

## Monitoring

An easy to read monitor provides accurate data for ground speed, fan speed, bin level, field-acres seeded, total acres seeded, and more. Equipped with Vansco monitor for mechanical drive and Topcon console for variable rate.

## Variable Rate System

The optional variable rate system with in-cab control features the Topcon X30. It allows you to change rates on the go with the press of a button.

## Auger

The 9s Series 8-inch auger with standard flighting is double-hinged for exceptional balance.

9  
SERIES  
S

## Walk-through Design

The walk-through design with a non-slip surface gives safe and easy access to loading areas. When the auger is down, access to the platform is available from both sides of the tank.

## Controlled Traffic

Controlled traffic farming is the practice of repeatedly driving in the same wheel tracks with all of your equipment. This makes for more efficient use of farmland and increased overall fuel savings, as it is easier to pull equipment on compacted soil. The controlled traffic tow-behind air cart can be configured to 3-meter track widths.

## Sizes and Configurations

Air carts are available in 240-bushel (two-tank), 252-bushel (three-tank) or 300-bushel (two-tank) capacities, in either tow-behind or tow-between models.

## Third Tank

A third-tank configuration allows broadcasting option for small oil seeds and grasses, starter fertilizer, or granular herbicide. The third tank option is available for 9240 and 9300 models.

## 9s SERIES AIR CART Specifications and Options
